

Óbuda University John von Neumann Faculty of Informatics				Institute of Software Engineering			
Name and code: Parallel Programming (NIXPEREMNE)						Credits: 5	
Computer Science MSc				Daytime 2019/20 year II. semester			
Subject lecturers: Dr. Gábor Kertész, Dr. habil. Miklós Kozlovsky							
Prerequisites: (with code)							
Weekly hours:		Lecture: 2	Seminar: 0	Lab. hours: 2	Consultation: 0		
Way of assessment:		Examination					
Course description							
Goal: The aim of the lecture is to deepen the knowledge of the students, regarding the design methods and questions for parallel computational systems, and the required programming skills.							
Course description: Students will learn, and obtain practical techniques used in parallel programming, such as thread handling, communication between threads, and synchronization. The lecture will give an additional overview on different programming variants of distributed systems.							

Lecture schedule											
Education week	Topic										
1	Fundamentals of Parallel Programming. Efficiency.										
2	Parallel design. Granularity. Load balance. Processes in operating systems.										
3	Designing parallel algorithms. Multithreading, thread parallelism. Race condition.										
4	Synchronization. Dekker's algorithm and Peterson's algorithm. Critical Section. Mutual Exclusion.										
5	MPI #1										
6	MPI #2										
7	Lamport's "bakery" algorithm. Atomic operations. Semaphore. Deadlock.										
8	Classical problems I: dining philosophers, readers-writers										
9	Classical problems II: cigarette smokers, barbershop. Monitor.										
10	Producer-consumer problem. Concurrent data structures. ABA problem.										
11	<i>Break</i>										
12	Master-worker pattern. Concurrent bag of jobs.										
13	Theoretical exam.										
14	Retake of the theoretical exam.										
Midterm requirements											
For the signature the midterm exam must be successfully completed ($\leq 50\%$).											
If the grade calculated from the midterm exam is at least good (4), then this grade will be offered.											
Midterm Test Scheduling											
Education week	Topic										
13	Theoretical test										
14	Retake										
Midterm grade calculation methods											
The midterm grade is calculated from the result of the theoretical test.											
Method of replacement											
In case of a missed theoretical exam, a retake test is available on the 14th week. If the necessary 50% is not reached, the exam can be retaken as part of the signature exam.											
Type of exam											
Written.											
Exam grade calculation methods											
If the grade calculated from the midterm exam is at least good (4), then this grade will be offered.											
In other cases, the grade of the final exam is used to calculate the grade.											
<table> <tr><td>0-49%</td><td>failed (1)</td></tr> <tr><td>50-62%</td><td>satisfactory (2)</td></tr> <tr><td>63-74%</td><td>average (3)</td></tr> <tr><td>75-86%</td><td>good (4)</td></tr> <tr><td>87-100%</td><td>excellent (5)</td></tr> </table>		0-49%	failed (1)	50-62%	satisfactory (2)	63-74%	average (3)	75-86%	good (4)	87-100%	excellent (5)
0-49%	failed (1)										
50-62%	satisfactory (2)										
63-74%	average (3)										
75-86%	good (4)										
87-100%	excellent (5)
