

Institute of Biomatics and Applied Artificial Intelligence						
Name of the subject:	Code of the subject:	Credits:	Weekly hours:			
				lec	sem	lab
Basics of Information Systems	NIXBI1EBNE	4	full-time	2		
Responsible person for the subject:			Classification:			
Subject lecturer(s): Dr. Kósi Krisztián						
Prerequisites:						
Way of the assessment:		Midterm grade				
Course description						
Goal:	Presentation of the most important factors and theoretical concepts of the emergence, and development of information technology. The subject and place of information technology in the sciences. The basic concepts of information theory. The basic concepts of encoding. Interpretation of minimum redundancy codes, major coding algorithms. The dictionary-based data compression principle, the algorithms of the most commonly used code systems. The principle and significance of adaptive encoding. The principle of fault tolerance and error correction systems. The practical part will be organized as concerted lectures, in which representatives of the Faculty or industrial companies will present the actual results of a field of information technology.					
Course description:	Concept of informatics. Emergence, development trends. Basic concepts of informatics. Concept and amount of information. Concept of entropy. Search theory. Concept of redundancy. Encoding process. Code tree. Prefix code. Statistics-based data compression. Dictionary-based data compression. Number systems. Conversion between number systems. Numeric, alphanumeric codes. Binary representation of integer and real numbers. Basics of fault tolerant systems. Error detecting and correcting. Soft computing techniques.					

Lecture schedule	
Education week	Topic
1.	Concept of informatics. Emergence, development trends. Basic concepts of informatics.
2.	Concept and amount of information. Number systems.
3.	Conversion between number systems.
4.	Binary representation of integer and real numbers.
5.	Byte orders. Numeric, alphanumeric codes.
6.	Concept of entropy. Search theory. Concept of redundancy.
7.	Encoding process. Code tree. Prefix code.
8.	Variable code length. Statistics-based data compression I.
9.	Statistics-based data compression II.
10.	Dictionary-based data compression.
11.	Basics of fault tolerant systems. Error detecting and correcting.
12.	Numerical computing techniques.
13.	Test
14.	Retake test.
Mid-term requirements	
Conditions for obtaining a mid-term grade/signature	Signature is denied in the case if the absence is more than 30% of the lessons, or didn't wrote all the midterms. The worst can be retaken in the last week. Based on the average of the tests the final grade is calculated

as follows:													
<table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Achieved result</th> <th>Grade</th> </tr> </thead> <tbody> <tr> <td>89%-100%</td> <td>excellent (5)</td> </tr> <tr> <td>76%-88<%</td> <td>good (4)</td> </tr> <tr> <td>63%-75<%</td> <td>average (3)</td> </tr> <tr> <td>51%-62<%</td> <td>satisfactory (2)</td> </tr> <tr> <td>0%-50<%</td> <td>failed (1)</td> </tr> </tbody> </table>		Achieved result	Grade	89%-100%	excellent (5)	76%-88<%	good (4)	63%-75<%	average (3)	51%-62<%	satisfactory (2)	0%-50<%	failed (1)
Achieved result	Grade												
89%-100%	excellent (5)												
76%-88<%	good (4)												
63%-75<%	average (3)												
51%-62<%	satisfactory (2)												
0%-50<%	failed (1)												
Assessment schedule													
Education week	Topic												
13	Test												
14	Retake												
Method used to calculate the <i>mid-term grade</i> (to be filled out only for subjects with mid-term grades)													
Based on the average of the tests													
Type of the replacement													
Type of the replacement of written test/mid-term grade/signature	At the last week, the worst midterm can be retaken. 14th week, Retake the worst test, If the grade is failed (1), and the signature was not deined, can be a take a signature retake exam.												
Type of the exam (to be filled out only for subjects with exams)													
Calculation of the exam mark (to be filled only for subjects with exams)													
Final grade calculation methods:
